SunBrick

BROAD SPECTRUM
SUNSCREEN CREAM

ADVANCED
FORMULA

Water-resistant
Hypoallergenic
Invisible formula
Non comedogenic

A little SPF a day
Keeps the wrinkles
away

Protection against both UVA & UVB rays.

SunBrick on regular use prevents premature wrinkling & skin cancer induced by UV Radiation. SunBrick is water resistant for intensive sun protection ideal for Asian skin. Regular use of SunBrick may help prevent premature ageing of the skin due to long term over exposure in sun.

Titanium Dioxide

is used in mineral-based sunscreens to help reflect and scatter UVA and UVB rays. Because titanium dioxide can help prevent sunburn and sun damage, SPF products with this ingredient can generally be used by all skin types looking to protect their skin from the sun.

Benzophenone-3

is a key ingredient in sunscreens and cosmetics. Its primary role is to protect the skin from the harmful effects of UV radiation. Benzophenone-3 absorbs UVB and some UVA rays, shielding the skin from sunburn and UV-induced damage. It is a popular choice in sunscreens due to its broad-spectrum UV protection capabilities

Microfine Zinc Oxide

is commonly used in sunscreen and sunblocks, it works as a protective barrier on your skin that absorbs and deflects the harmful UVA and UVB. It is more protective against long wave UVA and it prevents excessive heat from immersing in your skin surface.
